

# The ORC evaporator pinch: why an approach at the hot end is not a constraint

(a) building the cold composite

(b) v0.8 — hot-end rule,  $T_{3e} = 134.1$  °C,  $\eta = 0.2320$

(c) v0.9 — pinch-feasible,  $T_{3e} = 95.4$  °C,  $\eta = 0.1738$
